#### FORM C TYPE TEST VERIFICATION REPORT

All Micro-generators connected to the **DNO Distribution Network** shall be **Fully Type Tested**. This form is the **Manufacturer**'s declaration of compliance with the requirements of G98.

This form should be used when making a Type Test submission to the Energy Networks Association (ENA).

If the **Micro-generator** is **Fully Type Tested** and already registered with the ENA **Type Test Verification Report** Register, the **Installation Document** should include the **Manufacturer**'s Reference Number (the Product ID), and this form does not need to be submitted.

Where the **Micro-generator** is **Fully Type Tested** and not registered with the ENA **Type Test Verification Report** Register this form needs to be completed and provided to the **DNO**, to confirm that the **Micro-generator** has been tested to satisfy the requirements of this EREC G98.

Manufacturer's reference number		Fronius Symo GEN24				
Micro-generator technology		tran	sformerless			
Manufactu	rer name		Fro	nius International	GmbH	
Address				enter Fronius Str 1 00 Wels-Thalheim,

			Connection Option			
Registered	l Capacity,		kW single phase, single, split or three phase system			
use separa	te sheet if	8	kW three phase			
connection option.			kW two phases in three phase system			
				two phases split p	•	

**Manufacturer** Type Test declaration. - I certify that all products supplied by the company with the above **Fully Type Tested** reference number will be manufactured and tested to ensure that they perform as stated in this document, prior to shipment to site and that no site modifications are required to ensure that the product meets all the requirements of EREC G98.

Signed	Günter Frond Six 2 / 2600 Well And Helm Tel: +43/(0) 72 42 / 241-0, Fax: 47 8 25	On behalf of	Fronius International GmbH

Note that testing can be done by the **Manufacturer** of an individual component or by an external test house.

Where parts of the testing are carried out by persons or organisations other than the **Manufacturer** then that person or organisation shall keep copies of all test records and results supplied to them to verify that the testing has been carried out by people with sufficient technical competency to carry out the tests.

TR 29792

page 2 of 18

Operating Range: This test should be carried out as specified in EN 50438 D.3.1.

**Active Power** shall be recorded every second. The tests will verify that the **Micro-generator** can operate within the required ranges for the specified period of time.

The Interface Protection shall be disabled during the tests.

In case of a PV **Micro-generator** the PV primary source may be replaced by a **DC** source.

In case of a full converter **Micro-generator** (e.g. wind) the primary source and the prime mover **Inverter**/rectifier may be replaced by a **DC** source.

In case of a DFIG **Micro-generator** the mechanical drive system may be replaced by a test bench motor.

Test 1

Voltage = 85% of nominal (195.5 V)

Frequency = 47.5 Hz

Power factor = 1

Period of test 90 minutes

Test 2

Voltage = 110% of nominal (253 V).

Frequency = 51.5 Hz

Power factor = 1

Period of test 90 minutes

Test 3

Voltage = 110% of nominal (253 V).

Frequency = 52.0 Hz

Power factor = 1

Period of test 15 minutes

Remark: During the tests 1, 2 and 3 the unit does not disconnect, tests have been passed.

**Power Quality – Harmonics**: These tests should be carried out as specified in BS EN 61000-3-2. The chosen test should be undertaken with a fixed source of energy at two power levels a) between 45 and 55% and b) at 100% of **Registered Capacity**. The test requirements are specified in Annex A1 A.1.3.1 (**Inverter** connected) or Annex A2 A.2.3.1 (Synchronous).

Ω

Power Quality - Voltage fluctuations and Flicker: These tests should be undertaken in accordance with EREC G98 Annex A1 A.1.3.3 (Inverter connected) or Annex A2 A.2.3.3 (Synchronous) Starting Stopping Running  $\mathsf{d}_{\scriptscriptstyle{(t)}}$  $\mathsf{d}_{\max}$  $d_{\rm c}$  $d_{\text{max}}$  $d_{(t)}$  $\mathsf{P}_{\mathsf{st}}$ P<sub>+</sub>2 hours ď Measured 0 0 1.35 1.25 0.028 0.038 Values at test impedance Normalised 0 0 1.35 1.25 0.028 0.038 to standard impedance Normalised to required maximum impedance Limits set 4% 3.3% 3.3% 4% 3.3% 3.3% 1.0 0.65 under BS EN 61000-3-11 Test R 0.24 Χ 0.15 Ω Ω Impedance R Х 0.24 \* 0.15 \* Standard Ω Ω Impedance 0.4^ 0.25^

Ω

Χ

For voltage change and flicker measurements the following formula is to be used to convert the measured values to the normalised values where the power factor of the generation output is 0.98 or above.

Normalised value = Measured value\*reference source resistance/measured source resistance at test point.

Single phase units reference source resistance is 0.4  $\Omega$ 

Two phase units in a three phase system reference source resistance is 0.4  $\Omega$ .

Two phase units in a split phase system reference source resistance is 0.24  $\Omega$ .

Three phase units reference source resistance is  $0.24 \Omega$ .

Where the power factor of the output is under 0.98 then the X to R ratio of the test impedance should be close to that of the Standard Impedance.

The stopping test should be a trip from full load operation.

The duration of these tests need to conform to the particular requirements set out in the testing notes for the technology under test. Dates and location of the test need to be noted below.

Test start	10:14	Test end	12:14	21.12.202
Test location		aboratories, Fronius Internationals Str 1, A-4600 Wels-Thalheim,	•	

Maximum

Impedance

R

<sup>\*</sup> Applies to three phase and split single phase Micro-generators.

<sup>^</sup> Applies to single phase **Micro-generators** and **Micro-generators** using two phases on a three phase system.

**Protection – Frequency tests:** These tests should be carried out in accordance with EN 50438 Annex D.2.4 and the notes in EREC G98 Annex A1 A.1.2.3 (**Inverter** connected) or Annex A2 A.2.2.3 (Synchronous)

Function	Setting		Trip test		"No trip tests	,
	Frequency	Time delay	Frequency	Time delay	Frequency /time	Confirm no trip
U/F stage 1	47.5Hz	20s	47.50Hz	20.047s	47.7 Hz 30 s	Confirmed
U/F stage 2	47Hz	0.5s	47.00Hz	0.546	47.2 Hz 19.5 s	Confirmed
					46.8 Hz 0.45 s	Confirmed
O/F stage 1	52Hz	0.5s	52.009Hz	0.546s	51.8 Hz 120.0 s	Confirmed
					52.2 Hz 0.45 s	Confirmed

Note. For frequency trip tests the frequency required to trip is the setting  $\pm$  0.1 Hz. In order to measure the time delay a larger deviation than the minimum required to operate the projection can be used. The "No trip tests" need to be carried out at the setting  $\pm$  0.2 Hz and for the relevant times as shown in the table above to ensure that the protection will not trip in error.

**Protection – Voltage tests:** These tests should be carried out in accordance with EN 50438 Annex D.2.3 and the notes in EREC G98 Annex A1 A.1.2.2 (**Inverter** connected) or Annex A2 A.2.2.2 (Synchronous)

•	— <i>1</i> —— (					
Function	Setting		Trip test		"No trip tests	,
	Voltage	Time delay	Voltage	Time delay	Voltage /time	Confirm no trip
U/V	184V	2.5s	184.02V	2.523	188 V 5.0 s	Confirmed
					180 V 2.45 s	Confirmed
O/V stage 1	262.2V	1.0s	261.99V	1.028s	258.2 V 5.0 s	Confirmed
O/V stage 2	273.7V	0.5s	273.38V	0.531s	269.7 V 0.95 s	Confirmed
					277.7 V 0.45 s	Confirmed

Note for Voltage tests the Voltage required to trip is the setting  $\pm 3.45$  V. The time delay can be measured at a larger deviation than the minimum required to operate the protection. The No trip tests need to be carried out at the setting  $\pm 4$  V and for the relevant times as shown in the table above to ensure that the protection will not trip in error.

Negative Vector Shift	50.0Hz	-50 degrees	Confirmed

**Protection – Frequency change, RoCoF Stability test:** The requirement is specified in section 11.3, test procedure in Annex A.1.2.6 (**Inverter** connected) or Annex A2 A.2.2.6 (Synchronous).

Ramp range	Test frequency ramp:	Test Duration	Confirm no trip
49.0 Hz to 51.0Hz	+0.95 Hzs <sup>-1</sup>	2.1 s	Confirmed
51.0 Hz to 49.0Hz	-0.95 Hzs <sup>-1</sup>	2.1 s	Confirmed

**Limited Frequency Sensitive Mode – Overfrequency test:** This test should be carried out in accordance with EN 50438 Annex D.3.3 Power response to overfrequency. The test should be carried out using the specific threshold frequency of 50.4 Hz and **Droop** of 10%.

Test sequence at Registered Capacity >80%	Measured Active Power Output	Frequency	Primary Power Source	Active Power Gradient
Step a) 50.00 Hz ±0.01 Hz	8080W	50.00Hz		
Step b) 50.45 Hz ±0.05 Hz	7980W	50.45Hz		
Step c) 50.70 Hz ±0.10 Hz	7570W	50.70Hz		
Step d) 51.15 Hz ±0.05 Hz	6840W	51.15Hz	8.2kW	20%/Hz
Step e) 50.70 Hz ±0.10 Hz	7570W	50.70Hz		
Step f) 50.45 Hz ±0.05 Hz	7980W	50.45Hz		
Step g) 50.00 Hz ±0.01 Hz	8080W	50.00Hz		
Test sequence at Registered Capacity 40% - 60%	Measured Active Power Output	Frequency	Primary Power Source	Active Power Gradient
Step a) 50.00 Hz ±0.01 Hz	4030W	50.00Hz		
Step b) 50.45 Hz ±0.05 Hz	3980W	50.45Hz		
Step c) 50.70 Hz ±0.10 Hz	3780W	50.70Hz		
Step d) 51.15 Hz ±0.05 Hz	3415W	51.15Hz	4.1kW	20%/Hz
Step e) 50.70 Hz ±0.10 Hz	3780W	50.70Hz		
Step f) 50.45 Hz ±0.05 Hz	3980W	50.45Hz		
Step g) 50.00 Hz ±0.01 Hz	4030W	50.00Hz		
Steps as defined in EN 5043	8	1	l	I

<b>Power output with falling frequency test:</b> This test should be carried out in accordance with EN 50438 Annex D.3.2 active power feed-in at under-frequency.						
Test sequence	Measured Active Power Output	Frequency	Primary power source			
Test a) 50 Hz ± 0.01 Hz	8000W	50Hz	8.2kW			
Test b) Point between 49.5 Hz and 49.6 Hz	8000W	49.55Hz	8.2kW			
Test c) Point between 47.5 Hz and 47.6 Hz	8000W	47.55Hz	8.2kW			
NOTE: The operating point	NOTE: The operating point in Test (b) and (c) shall be maintained for at least 5 minutes					

Re-connection timer.						
Test should	Test should prove that the reconnection sequence starts after a minimum delay of 20 s for					
restoration o	restoration of voltage and frequency to within the stage 1 settings of Table 2.					
Time delay	Measured	Checks on no reconnection when voltage or frequency is				
setting	delay		brought to just	outside stage 1	limits of table 2.	
20.0s	71.92s		At 266.2V	At 180.0V	At 47.4Hz	At 52.1Hz
Confirmation that the Micro-generator		Confirmed	Confirmed	Confirmed	Confirmed	
does not re-co	does not re-connect.					

Fault level contribution: These tests shall be carried out in accordance with EREC					
G98 Annex A1 A.1.3.5 (Ir	nverter co	nnected) ar	nd Annex A	2 A.2.3.4 (S	Synchronous).
For machines with electro-mag	gnetic output		For <b>Inverter</b>	output	
Parameter	Symbol	Value	Time after fault	Volts	Amps
Peak Short Circuit current	i p		20ms	4.24	49.4
Initial Value of aperiodic current	Α		100ms	3.6	22.4
Initial symmetrical short- circuit current*	l <sub>k</sub>		250ms	3.43	14.3
Decaying (aperiodic) component of short circuit current*	i <sub>DC</sub>		500ms	3.4	10.3
Reactance/Resistance Ratio of source*	X/ <sub>R</sub>		Time to trip	0.110	In seconds
1 —					

For rotating machines and linear piston machines the test should produce a 0 s - 2 s plot of the short circuit current as seen at the **Micro-generator** terminals.

<sup>\*</sup> Values for these parameters should be provided where the short circuit duration is sufficiently long to enable interpolation of the plot

Logic Interface.	Yes
<b>Self-Monitoring solid state switching:</b> No specified test requirements. Refer to EREC G98 Annex A1 A.1.3.6 ( <b>Inverter</b> connected).	NA
It has been verified that in the event of the solid state switching device failing to disconnect the <b>Micro-generator</b> , the voltage on the output side of the switching device is reduced to a value below 50 V within 0.5 s.
